10 MOST PROMISING

HEALTHCARE STARTUPS -2018

The Healthcare sector in India is one of the intensely developing sectors which contribute nearly 6 percent of the country's GDP. Only by the proper implementation of efficient data-driven technologies at the forefront in both tertiary as well as primary sectors, it has been possible to generate major developments in the healthcare ecosystem of the country. The whole task was burdensome but was facilitated long-term patient-centric solutions developed by industry experts. With the rapid growth of requirements in healthcare along with the tremendous amount of inaccessibility for healthcare products and services, the generation requires low-cost, tech-driven, scalable, innovative and out-of-the-box solutions indeed.

The conventional process for delivery of healthcare products and services is being hugely disrupted by the healthcare start-ups. Statistics reveal that only in the year of 2015; close to 300 start-ups have emerged into the healthcare sector. Be it medical equipment inventions, or operating models or even areas for drug delivery, these highly enthusiastic are steadily and meticulously fixing the loops-holes by sustainable business models and differentiated product offerings. Currently, India can be considered as the fastest growing base for start-ups and close to 8 percent of the B2C start-ups are based around the health-tech sector.

Considering all these advancements in the healthcare domain, siliconIndia startupcity has come up with a list of '10 Most Promising Healthcare Startups' which strive to gain excellence with every passing day. The following list has undergone strict scrutiny by a panel of judges which include CEOs, CXOs, CIOs, analysts and the Startupcity editorial team.
